

# Global Analysis of Real-World Test Environments for Connected and Automated Mobility

Dev T

September 2023

## **Content:**

### Introduction

#### 1.1 Overview of Connected and Automated Mobility

#### 1.2 Purpose of the Report

#### 1.3 Methodology

### Technologies for Connected and Automated Mobility

#### 2.1 5G Technology and its Advancements

##### 2.1.1 5G-CARMEN Project: Advancing CCAM in the Bologna-Munich Corridor

##### 2.1.2 5GCroCo Project: Large-Scale 5G Trials for CCAM in Europe

##### 2.1.3 NIST's 5G Spectrum Sharing Test Bed: Testing 5G Communications

##### 2.1.4 5G Testbeds and Trials Program (UK): Investigating Various Applications

##### 2.1.5 European 5G Testbeds: Enabling Seamless Cross-Border CCAM Services

##### 2.1.6 5G Cross-Border Corridors: Large-Scale Testing of CAM in Europe

##### 2.1.7 AstaZero: A World-Class Test Environment in Sweden

#### 2.2 Vehicle-to-Everything (V2X) Communication

##### 2.2.1 Zenzic CAM Scale-Up Programme: Accelerating V2X Solutions

##### 2.2.2 Mcity Test Facility: Advancements in C-V2X Technology

##### 2.2.3 COSMOS Testbed: Integrating V2X Communication in Urban Environments

##### 2.2.4 V2X Enabled Platooning: Enhancing Efficiency and Safety in Transport

##### 2.2.5 5G-MOBIX Project: Investigating V2X Technologies for Multi-Domain Services

##### 2.2.6 Cruise's Innovations in V2X Communication

##### 2.2.7 K-City: A Fake Town for Testing CAV Technologies

#### 2.3 Cooperative Intelligent Transport Systems (CITS)

##### 2.3.1 National Science Foundation (NSF) Testbeds in the US: Robotics and Traffic Safety

##### 2.3.2 Sprint's Curiosity Lab: Developing a Smart City with Cooperative ITS

##### 2.3.3 CAM Testbeds UK: Companies and Environments for C-ITS Development

##### 2.3.4 Smart Santander Project: Deploying IoT Sensors for Urban C-ITS Applications

##### 2.3.5 JARI Test Site: Reproducing Various Environments for C-ITS Testing

#### 2.4 Vehicle Information and Communication Systems (VICS)

##### 2.4.1 India's First 5G Testbed: Focus on Autonomous Navigation Systems

##### 2.4.2 Sustainable Intelligent Mining Systems: Underground 5G Network for VICS

##### 2.4.3 AIMES Project: Advancements in Multimodal VICS for Sustainable Transport

##### 2.4.4 ENSEMBLE Project: Multi-Brand Truck Platooning for Efficient VICS

## **2.4.5 CavForth's Contributions to Vehicle Information and Communication Systems**

### **2.5 Internet of Things (IoT) in CAM Solutions**

- 2.5.1 ENSEMBLE Project: Implementing IoT for Multi-Brand Truck Platooning**
- 2.5.2 SECUREIOT Project: Cross-Industry Security as a Service for IoT Sectors**
- 2.5.3 AIMES Project: Developing IoT-Enabled Multimodal Transportation Systems**
- 2.5.4 Smart Santander Project: IoT Sensors for Smart City Applications**
- 2.5.5 IoT Solutions for CAM: Advancing Safety and Efficiency in Mobility**

### **2.6 Artificial Intelligence (AI) and Machine Learning in CAM**

- 2.6.1 Machine Learning in CAM Testbeds: Enhancing Autonomous Decision-Making**
- 2.6.2 AI for Traffic Management: Optimising Mobility Solutions in Real-Time**
- 2.6.3 Ottawa L5: A Living Lab for AI-Driven CAV Innovation and Implementation**
- 2.6.4 AI at the Edge: Real-Time Analysis for Connected Vehicles**
- 2.6.5 AI in Cybersecurity: Protecting CAM Systems from Threats**
- 2.6.6 Waymo's Advancements in AI and Machine Learning for CAM**
- 2.6.7 Wayve's AI Platform for CAM: Leveraging Reinforcement Learning and Simulation**

### **2.7 Edge Computing and Cloud Services in CAM**

- 2.7.1 Multi-Access/Mobile Edge Computing (MEC): Enhancing V2X Communication**
- 2.7.2 Cloud-Based CAM Solutions: Scalability and Data Processing Advancements**
- 2.7.3 AI at the Edge: Real-Time Analysis for Connected Vehicles**

### **2.8 Cybersecurity for Connected and Automated Mobility**

- 2.8.1 Cybersecurity Testbeds: Evaluating Vulnerabilities in CAM Systems**
- 2.8.2 Standards-Compliant On-Board Unit (OBU) for Secure CAM Services**
- 2.8.3 SECUREIOT Project: Cross-Industry Security as a Service for CAM Solutions**

### **2.9 Augmented Reality (AR) and Virtual Reality (VR) in CAM**

- 2.9.1 AR for Connected Vehicles: Enhancing Driver Awareness and Safety**
- 2.9.2 VR Simulation for CAM Testbeds: Realistic and Cost-Effective Testing**

### **2.10 Advanced Sensing and Perception Technologies**

- 2.10.1 Vehicle-In-the-Loop Test Environment: Combining Microscopic Traffic Simulation**
- 2.10.2 Sensor Technologies for CAM Testbeds: Improving Perception and Safety**
- 2.10.3 Vehicle Sensors and Sensor Fusion: Enabling Accurate Perception in CAM**
- 2.10.4 New ICV Test Zones in China: Supporting Innovation and Testing of ICV Technologies**

## **2.11 Overview**

Comparison of Virtual and Controlled Environments

3.1 Advantages of Simulation and Controlled Environments

3.2 HASTE Project: Assessing Safety of In-Vehicle Information Systems

3.3 Virtual Driving Simulators: Accuracy and Empirical Data

3.4 Leeds Driving Simulator: Realistic Driving Experience

3.5 Vehicle-In-the-Loop Test Environment: Simulating Real-World Scenarios

Smart Mobility Living Lab and Its Comparison to Other Test Environments

4.1 Smart Mobility Living Lab: An Overview of the Test Environment

4.2 SWOT Analysis of Smart Mobility Living Lab

4.3 Comparison with Other CAM Testbeds: Key Differences and Strengths

Midlands Future Mobility and Its Comparison to Other Test Environments

5.1 Midlands Future Mobility: An Overview of the Test Environment

5.2 SWOT Analysis of Midlands Future Mobility

5.3 Advantages and Unique Features of Midlands Future Mobility

Mass Mobility Aspirations

6.1 Quantum Sensors

6.2 Quantum-based vacuum gauge system

6.3 Digibus Austria

6.4 SINFONICA

Conclusion

7.1 Key Findings from the Analysis

7.2 Implications for Connected and Automated Mobility

7.3 Future Directions and Recommendations

References
